

Ceramic-Fortified Urethane, UV-Cured 100% CARBII Compliant VOC Content: 0

Finish Manufacturer: AkzoNobel

Available on: All floors up to 8" wide.

Embedded in this finish are millions of invisible, incredibly hard ceramic particles that dramatically increase our floors' resistance to surface wear and scratches.

Many floors are finished using a coating that contains varying amounts of aluminum oxide as a hardening additive. Although aluminum oxide coatings can be quite durable, we feel that our ceramic finish is superior for the following reasons:

- Durability in service virtually identical to aluminum oxide;
- Clarity and smoothness superior to aluminum oxide;
- When necessary, can be easily recoated on-site unlike aluminum oxide which usually cannot be refinished without stripping down to base wood.

Ceramic/Oil Hybrid, UV-Cured 100% CARBII Compliant VOC Content: 0

Finish Manufacturer: AkzoNobel

Available on: All floors up to 12" wide.

Our Ceramic/Oil Hybrid Finish gives the low-gloss, low-build look of a European oil-finished floor without the maintenance of an oil floor.

Care & Maintenance – Ceramic Finishes

Both UV-cured Ceramic finishes are maintained via simple cleaning with Bona Wood Floor Cleaner or the like. Any cleaning products which add waxes, oils or silicones should be avoided as they will leave a cloudy residue.

Re-finishing is accomplished by a simple screening (not sanding), followed by application of a waterborne polyurethane finish, such as Bona Traffic or Bona Naturale.

Rubio Monocoat European Hardwax Oil **100% CARBII Compliant** **VOC Content: 0**

Finish Manufacturer: Muylle-Facon, Issegem, Belgium

Available on: All floors up to 12" wide.

- A complete durable one-coat plant-based finish for wood floors or any other wood finishing need.
- Conveys an extremely natural look, with little to no film-build on the surface of the wood.
- Contains neither volatile organic compounds nor other harmful chemicals.

Certain colors can be created with the coloration contained in the oil finish itself. Degradation of the color in these specially-designed floors can be repaired through the maintenance with the proper colored oil. This is perfect for extremely high-traffic environments.

Our Rubio oil-finished floors ship with all final coatings already applied and cured. No post-installation coating is required. Please note: This is not usually the case with other manufacturer's oil-finished floors!

Care & Maintenance – Rubio European Hardwax Oil Finishes

Rubio manufactures and distributes a range of care and maintenance products. Daily or weekly cleaning entails damp-mopping with Rubio Soap and water. Spot-cleaning for difficult spots requires the use of Rubio Refresh. Only Rubio-approved products may be used on Rubio-finished floors. Use of non-approved products can damage the finish and void the Finish Warranty.

When Rubio floors show signs of wear they should be re-oiled using the correct Rubio Oil 2C color formulation.

WOCA Oil **100% CARBII Compliant** **VOC Content: 0**

Finish Manufacturer: Woodcare Denmark

Available on: All floors up to 12" wide.

Many of the same characteristics of our Rubio finish, with a little bit more shine.

Care & Maintenance – WOCA Oil Finishes

WOCA manufactures and distributes a range of care and maintenance products. Daily or weekly cleaning entails damp-mopping with WOCA Master Soap and water. Only WOC- approved products may be used on WOCA-finished floors. Use of non-approved products can damage the finish and void the Finish Warranty.

Quarterly application of WOCA Oil Refresher will maintain shine and combat wear and tear. Floors which have become worn or dingy can be rejuvenated through the simple application of WOCA Maintenance Oil.
